

## Komax presents a Host of Wire Processing Highlights

*Following the successful launch of the new Kappa generation with the Kappa 330 and Kappa 350 models at last year's Productronica, we are especially pleased to present our three new machine types, Kappa 310, Kappa 320 and Kappa 321, at this year's In-house Show in October. High performance and increased power combined with convenient touch operation are the hallmarks of the new products. The possibilities opened up by sensors make the automatic cut and strip machines in the new Kappa family even more unique!*

*Komax has also taken steps in professional quality control and reduced changeover times to widen its lead in the market. There is an end-to-end chain of integrated and automated quality measuring devices and process monitoring functions available for the Komax Alpha, Gamma and Zeta fully automatic crimping machines. And changeover time is one of the biggest untapped sources of potential optimization.*

*Correct service is another way to boost productivity. With its expanded and newly structured service team, Komax now offers a much expanded range in this regard. Our professional service support is geared to your needs and offers you definite added value in the future.*

*Many of our customers travel long distances to visit our In-house Show. We would like to thank you at this juncture for making that big effort. It means a lot to us to be able to present our newest products to you here in Dierikon and we will do our utmost to ensure that your visit is well worthwhile for you.*

*Josef Zumstein, Head of Sales and Marketing*

### COVER

The real standout feature of the Kappa 321 is the new swivel technique utilized in the wire drive axes.
